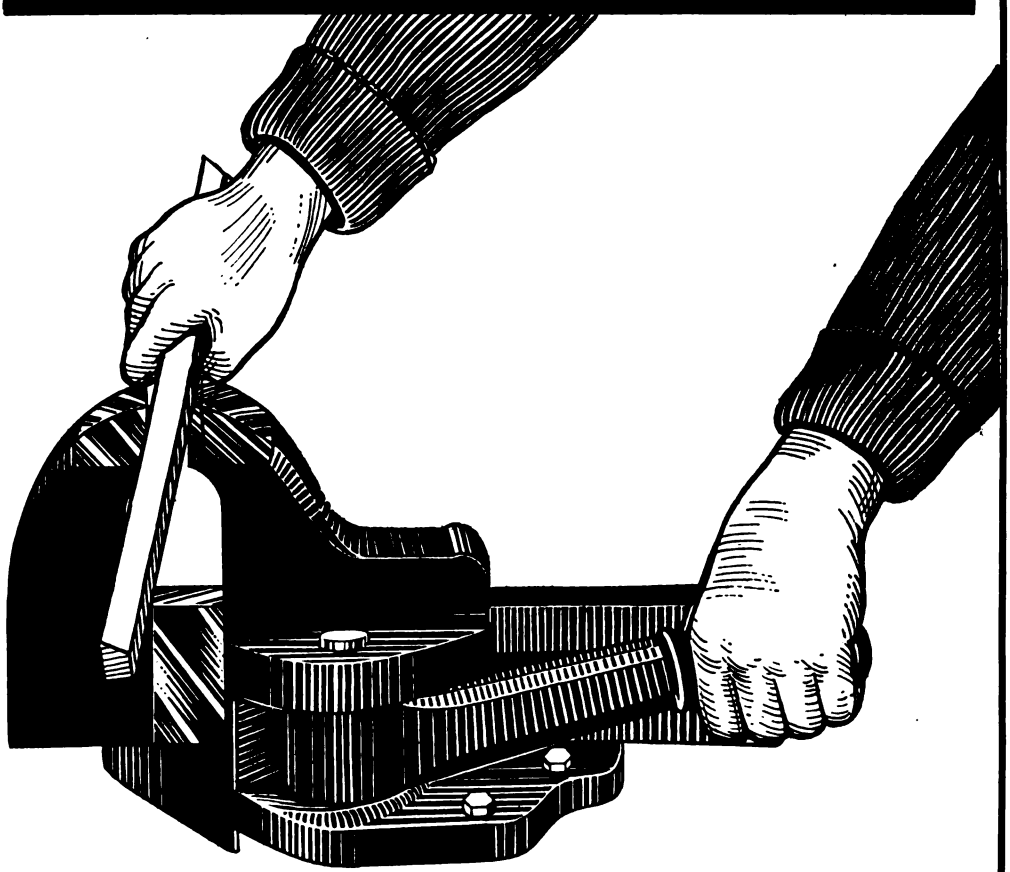
Just Move Lever Forward



Fisher Quick-Acting Lever Vise

You will never know how much time you have lost or how much annoyance you have avoided until you have used the Fisher Quick-Acting Lever Vise.

Work inserted in the jaws is held firmly in place by a forward movement of the lever, and cannot be released until the lever is pushed back.

The Fisher Lever Vise is made of gun metal, with a solid bar, and its parts are interchangeable. The jaws are faced with cast tool-steel, file-cut and properly tempered.

It is a high-grade, compact and durable tool and should be in every garage and repair shop.
